

HEATEC

WHISTLEBLOWER™ phone dialer

OUR NEW WHISTLEBLOWER PHONE DIALER sends alert messages about your asphalt heating system. It phones your plant operators with a recorded voice message in the event of certain conditions that could prevent or delay production of hot mix asphalt.

It is a much simpler system than our Automated Monitor (Chatterbox). But it costs far less and still provides essential functions.

We achieved the lower cost by combining standard electronic components into a unit customized to work with controls of asphalt heating systems. The heart of the unit is a dialer used extensively in conventional industrial and home security systems.

Our standard unit has two channels. Normally one channel is used to report any abnormal condition detected by the flame monitor used on most heaters. And the second is normally used for reporting abnormally low temperature detected by the modulating controller used on most heaters. The unit has

a backup battery so it still works during a power outage. We can add one or two additional channels upon request.

The WhistleBlower dialer can be set up to call up to eight conventional telephones, cellular phones, voice and/or numeric pagers. It can make both local and long-distance calls.

When activated, the dialer instantly begins calling the numbers in sequence. If a call cannot be completed it makes additional attempts before calling the next number. During each successful connection the message is repeated 1 to 3 times, as pre-selected.

You prepare your own recorded messages, using a real person to speak in a language you choose.

We provide a Heatec wiring diagram showing how to connect the unit to the heater control system. You also get the original dialer manual which provides all the information needed to pre-record messages and operate the unit.
